Summary

Backend-focused developer with hands-on experience building high-performance, scalable systems using Node.js, Python, and FastAPI. Proficient in designing RESTful APIs, working with SQL/NoSQL databases, caching layers (Redis), and message queues (BullMQ). Experienced with JSON Web Token (JWT) authentication, rate limiting, containerization (Docker), and integrating AI/Retrieval-Augmented Generation (RAG) pipelines. Strong DSA foundation with 900+ problems solved and a top 0.3% LeetCode ranking.

Education

Bachelor of Technology in Computer Science and Engineering

Manipal University Jaipur

Jaipur, Rajasthan

August 2023 – July 2027

CGPA: **9.05** (till 5th semester)

Experience

Web Development Intern

Indavis Lifesciences, Haridwar

June 2025 – July 2025

- Maintained and updated **7+ web pages/routes**, ensuring smooth performance and content accuracy.
- Collaborated with teams to align website updates with **brand and business objectives**.

Projects

Real Time Stock Trading Backend Postman

Node.js, Express, MySQL, Redis, BullMQ, JWT, Docker, Argon2,

- Built high-performance leaderboard system using Redis Sorted Sets with pipeline optimization, **achieving <50ms query time**.
- Engineered automated price simulation engine using **BullMQ + Redis with 30-minute repeatable jobs**, updating stock prices with $\pm 25\%$.
- Secured APIs with JWT authentication (access + refresh tokens), custom Token Bucket **rate limiter at 5 req/sec per user**, and containerized Redis using **Docker for BullMQ job processing** and leaderboard cache management.

RAG Discord Bot

Python, FastAPI, LangChain, FAISS, Discord.py, Groq

- Engineered a **hybrid retrieval system** merging **10 contextual chunks** per query, increasing answer accuracy by **60%** over single-method retrieval.
- Designed a **per-guild configuration system** supporting **6+ tunable parameters** temperature, tokens, retrieval depth, chunk size and overlap.
- Architected a production-ready **FastAPI backend** with multi-server isolation, permission-gated uploads, per-guild vector stores, caching, rate limiting, and support for **10+ URLs and 5+ PDFs per request** for efficient multi-source Retrieval-Augmented Generation (RAG).

Video Streaming & User Management Backend Postman, ffmpeg

Node.js, MongoDB, Express, Cloudinary, JWT, Bcrypt,

- Implemented **JWT-based authentication** with access and refresh tokens, ensuring secure login, logout, and token refresh workflows.
- Executed a **video upload pipeline** with **HTTP Live Streaming (HLS) transcoding** (fluent-ffmpeg), **adaptive bitrate streaming** (360p/720p), **Cloudinary** segment hosting.
- Optimized **MongoDB queries with indexes and aggregations** for watch history, subscriptions, and tweet analytics, improving **API response times from ~200ms to ~120ms** and enabling **real-time analytics** for users.

Technical Skills

Programming: Python, JavaScript, C, C++, Java, HTML, CSS

Web Technologies: Node.js, Express.js, FastAPI, React, Tailwind CSS, Streamlit, REST APIs

Database: MySQL, MongoDB, Redis, FAISS, SQLite3

Libraries/Frameworks: LangChain, HuggingFace, Discord.py, Pandas, NumPy, JWT, Bcrypt, Argon2, Matplotlib, Express.js, BullMQ

Tools & Platforms: Docker, Git, GitHub, VS Code, Jupyter Notebook, Postman API, Cloudinary, Groq

Core Concepts: Data Structures, Algorithms, System Design, OOP, Operating Systems, Machine Learning, ACID Transactions, Caching, Rate Limiting, Authentication & Authorization, Vector Databases, RAG, RESTful API Design, Microservices, Event-driven Architecture, CI/CD

Achievements

- Received Dean's Excellence Award across multiple semesters for maintaining a 9.0+ CGPA.
- Solved **900+ DSA problems** across various platforms.
- LeetCode: Ranked in the top **0.3%** globally in terms of Problem Solved.
- Qualified for Round 2 in **MUJHackX Hackathon** among 1300+ participants at Manipal University Jaipur.
- Qualified for Round 2 in **ZS Campus Beats 2026** among **7,000+ candidates** and **2,450+ teams**.
